A MOBIUS GROUP COMPANY

AMS (Alarm and Monitoring Systems) systems from MYM monitor any number of third party systems, aboard any vessel.

We love the science and the practice of marine operations. Whether helping captains and crews with **safety and efficiency** or enjoying the waves ourselves, we're sticklers for the **best possible experience** out there **on the water**.

The Professionals

From design and specification through engineering, testing and service, we've earned real world AMS stripes. Our extensive technical knowledge guides the alarm and monitoring network we build for you.

Pete Milton and Daniel Ryder-Smith are

PETE MILTON
formerly VP of
Servowatch
USA

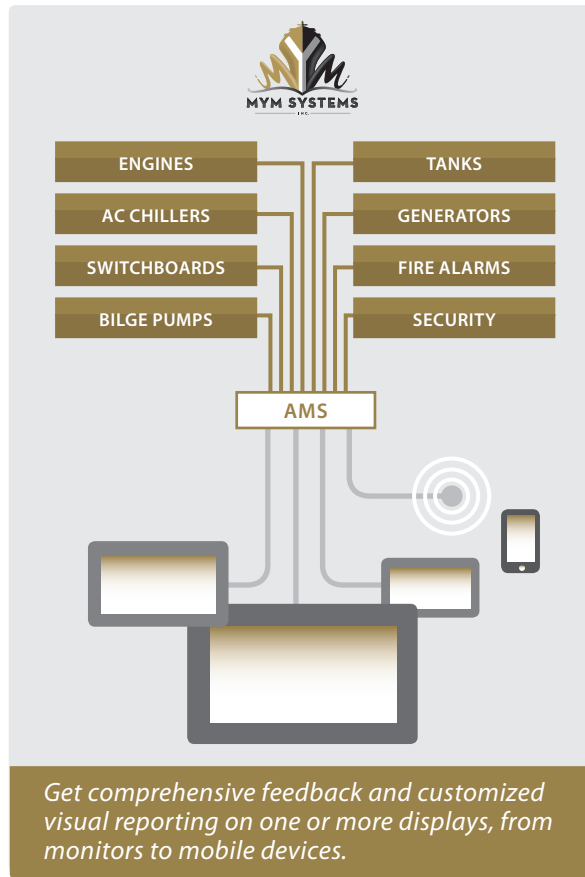

DANIEL RYDER-SMITH
formerly of
Servowatch
USA

instrumental to the operations and success of MYM Systems. Together they bring nearly 40 years experience in marine alarm monitoring and control.

Our Servowatch relationship means exclusive sales and service for the U.S. and the Caribbean.

Sail through class and flag state approvals

Inspections, testing and approvals for any AMS system include proper documentation (scope-of-supply, all equipment specifications and system block diagrams) for an efficient process.

Cost effective new builds and refits

New builds include complete system engineering plus specification of the best class-approved components from trusted vendors. For refits, we maximize existing wiring and sensor usage, recommend the best-matched equipment, and access all remaining protocols. This modular approach of preservation-plus-recommendation saves significant time and money.

Threatening legacy issues (**surprise!**) are promptly tamed with a creative flexibility and a dash of seasoned reverse-engineering.

Follow up that respects your schedule

Smooth system operation is our first priority.

Training

We teach you and your crew a comfortable mastery of your new system.

Concierge service

Because yours is not likely a 9 to 5 workday, we're here ready to answer your questions around the clock. We'll travel anywhere to meet your needs or, if your vessel is internet connected, MYM uses remote diagnostics for many issues. Often system updates and even upgrades are possible using remote connection.

Our West Palm Beach area headquarters is ideal for learning about the possibilities of new technologies. For training and for planning any scale of project, come speak with our experts.

Let us help you properly assess your new build or refit AMS needs. We're ready to apply our years of experience toward getting your vessel fitted with the right custom solution.
